Content SEO
98%
1288 / 1308 applicable checks passed

Technical SEO
91%
1892 / 2076 applicable checks passed

Audit completeness

Inspected	Passed	Inspection failed	Skipped	Pending
184	0	0	0	0

Counts refer to distinct inspected or queued URL/language variants. Passed is an inspected subset, not an additional outcome. Skipped URL records include non-page destinations. 32 distinct skipped URL records.

276 raw observations · 138 URL · 47 resources · 92 repeat observations · 184 inspected variants with SEO issues · 276 page attempts · 381 network requests

> **Incomplete verification - scores are partial evidence, not whole-site health.**
> Review pending pages and inspection errors, then resume or rerun before making a complete-site comparison.

Historical evidence was recalculated with the current deduplicated-check formula. This is not a fresh inspection or proof of production improvement.

Methodology

Score = round(100 × passed applicable checks / evaluated applicable checks). Content and technical checks are independent. Recommendations are unscored. Failed, skipped and pending inspections provide no SEO score or passing check. Repeated observations of the same URL, server language and check are not additional independent checks. These percentages do not predict Google rankings.

624 documented scanner-classification corrections use saved response evidence; full details remain in the full report and JSON.

Immediate action items

1. Confirm the observed server language and preferred URL before changing metadata or indexing directives.
2. Resolve request failures or unfinished work and complete a comparable scan.
3. Use the prioritized causes on page 2; retain the full report and JSON for every occurrence and verification step.

Prioritized distinct findings

Grouped by underlying cause; affected URL and language occurrences remain in the full report. This summary does not suppress or change scored checks.

1 **Page is missing from discovered sitemaps** Warning

Keep canonical, indexable public URLs in the Metadata API sitemap.

138 URLs · 276 occurrences · en, vi · https://www.garyhome.vn/contact?area=bac-tu-liem

2 **Repeated paragraph detected** Warning

Review whether the repeated passage is intentional; consolidate accidental duplication.

13 URLs · 24 occurrences · en, vi · https://www.garyhome.vn/homes/1-bedroom-apartment-for-rent-on-nguyen-cong-hoan-street-ba-dinh-bright-and…

3 **Different pages share a title** Warning

Review the page purpose and use a specific, accurate summary where appropriate. Shared text is not automatically a search penalty.

3 URLs · 6 occurrences · en, vi · https://www.garyhome.vn/about

4 **Review clarity and relevance** Recommendation

Read the page in its target language. Explain unfamiliar terms, break up dense passages, verify facts and answer the reader's intent.

138 URLs · 276 occurrences · en, vi · https://www.garyhome.vn/contact?area=bac-tu-liem

5 **Some link destinations were not verified** Recommendation

Review skipped URLs and rescan relevant destinations. This audit does not certify unchecked links.

138 URLs · 276 occurrences · en, vi · https://www.garyhome.vn/contact?area=bac-tu-liem

6 **Server response timing recorded** Recommendation

Compare timings over time. Use browser performance tooling to investigate slow pages.

138 URLs · 276 occurrences · en, vi · https://www.garyhome.vn/contact?area=bac-tu-liem

7 **No JSON-LD found** Recommendation

Add a relevant schema type only when appropriate. Validate eligibility with Google's Rich Results Test.

99 URLs · 198 occurrences · en, vi · https://www.garyhome.vn/contact?area=bac-tu-liem

8 **Review description truncation** Recommendation

Put essential information first. Do not remove useful detail solely to meet a character target.

21 URLs · 42 occurrences · en, vi · https://www.garyhome.vn/homes/1-bedroom-apartment-for-rent-on-nguyen-cong-hoan-street-ba-dinh-bright-and…

3 additional distinct causes are available in the full report.

Limitations: server HTML inspection is not browser/Edge compatibility testing, Core Web Vitals, rich-result eligibility or actual Google index status. URLs, user-authored content and raw evidence are never translated by this report.
